Apex Triggers

Get Started With Apex Trigger:

AccountAddressTrigger.apxt:

```
trigger AccountAddressTrigger on Account (before insert, before update) {

    for(Account a: Trigger.New){
        if(a.Match_Billing_Address__c == true && a.BillingPostalCode!= null){
            a.ShippingPostalCode=a.BillingPostalCode;
        }
    }

}
```

Bulk Apex Triggers:

ClosedOpportunityTrigger.apxt:

```
trigger ClosedOpportunityTrigger on Opportunity (after insert, after update) {
    List<Task> taskList = new List<Task>();
    //first way
    for(Opportunity opp : [SELECT Id, StageName FROM Opportunity WHERE StageName='Closed
Won' AND Id IN : Trigger.New]){
        taskList.add(new Task(Subject='Follow Up Test Task', WhatId = opp.Id));
    }

    //second way and we should use this
    /*
     for(opportunity opp: Trigger.New){

        if(opp.StageName!=trigger.oldMap.get(opp.id).stageName)
        {

            taskList.add(new Task(Subject = 'Follow Up Test Task',
                                  WhatId = opp.Id));
        }

    }
                                                    */
```

```
    if(taskList.size()>0){
        insert tasklist;
    }

}
```

Apex Testing

Get Sarted With Apex Unit Tests:

VerifyDate.apxc:

```
public class VerifyDate {
//method to handle potential checks against two dates
public static Date CheckDates(Date date1, Date date2) {
//if date2 is within the next 30 days of date1, use date2.  Otherwise use the end of the
month

return date2;
} else {
return SetEndOfMonthDate(date1);
}
}
//method to check if date2 is within the next 30 days of date1
private static Boolean DateWithin30Days(Date date1, Date date2) {
//check for date2 being in the past

//method to return the end of the month of a given date

Integer totalDays = Date.daysInMonth(date1.year(), date1.month());
Date lastDay = Date.newInstance(date1.year(), date1.month(), totalDays);
return lastDay;
}
```

```
}
```

TestVerifyDate.apxc:

```
@isTest

        Date testDate = Date.newInstance(2018, 03, 31);
        System.assertEquals(testDate,resultDate);
    }
}
```

Test Apex Triggers:

RestrictContactByName.apxt:

Apex Specialist SuperBadge

```
trigger RestrictContactByName on Contact (before insert, before update) {
//check contacts prior to insert or update for invalid data
For (Contact c : Trigger.New) {
if(c.LastName == 'INVALIDNAME') {           //invalidname is invalid
c.AddError('The Last Name "'+c.LastName+'" is not allowed for DML');
}
}
}
```

TestRestrictContactByName.apxc:

```
@isTest

      //try inserting a Contact with INVALIDNAME
      Contact myConact = new Contact(LastName='INVALIDNAME');

      Database.SaveResult result = Database.insert(myConact, false);
      Test.stopTest();
      // Verify

      System.assertEquals('Cannot create contact with invalid last name.',
                          result.getErrors()[0].getMessage());

   }
}
```

Create Test Data for Apex Tests:

RandomContactFactory.apxc

```
//@isTest
public class RandomContactFactory {
   public static List<Contact> generateRandomContacts(Integer
numContactsToGenerate, String FName) {
```

```
        List<Contact> contactList = new List<Contact>();

        for(Integer i=0;i<numContactsToGenerate;i++) {
            Contact c = new Contact(FirstName=FName + ' ' + i, LastName = 'Contact '+i);
            contactList.add(c);
            System.debug(c);
        }
        //insert contactList;
        System.debug(contactList.size());
        return contactList;
    }

}
```

Use Future Methods:

AccountProcessor.apxc:

```
public class AccountProcessor

  @future
  public static void countContacts(Set<id> setId)
  {
     List<Account> lstAccount = [select id,Number_of_Contacts__c , (select id from

        acc.Number_of_Contacts__c = lstCont.size();
     }
     update lstAccount;
  }
}
```
